# Twisted Pair Solutions WAVE® Software Granted Certificate of Networthiness by U.S. Army

**Seattle, Washington, USA June 23, 2009** Twisted Pair Solutions, Inc.([www.twistpair.com](http://www.twistpair.com)), a pioneer in unified group communications software built to open standards, today announced that its WAVE software has been granted a Certificate of Networthiness (CoN) for Department of Defense (DoD) U.S. Army installations. WAVE has been deployed by the DoD since 2002 and by placing it on the Army Valid CoN list, unit Commanders can accelerate new deployments across the U.S. Army.

For military commanders seeking greater situational awareness on the battlefield, interoperable communications is key. Enhanced communications using radio-over-IP (RoIP) software that can easily and securely extend access to tactical radio networks and other IP-enabled communications systems in bandwidth constrained networks promotes rapid information dissemination and informed decision-making.

This certification for WAVE further validates the approach we have taken in developing a world-class software application that securely supports critical communications over IP networks, said Tom Guthrie, President and CEO at Twisted Pair Solutions. Now US Army installations will be able to continue to deploy WAVE on Army networks and be assured of its compliance with applicable security and technical implementation guidelines.

The WAVE CoN was granted following a review of technical documentation, industry research, DoD and Army guidelines and regulations, as well as interviews with current Army administrators of WAVE systems.

## **About Twisted Pair Solutions, Inc.**

Twisted Pair Solutions is the software company behind WAVE®, the only Radio-over-IP (RoIP) platform designed specifically to extend the capability, flexibility and value of other communications technologies, products and solutions. OEM vendors, major systems integrators and software development companies from around the world have chosen to deploy, integrate or build upon our core platform technology because only a WAVE-powered solution is synonymous with battle-hardened, globally deployed, mission-critical voice communications. Twisted Pair Solutions is headquartered in Seattle, Washington, USA with offices in the United Kingdom and Australia. Visit us at [www.twistpair.com](http://www.twistpair.com)
